

Sticky Die Problem?

AS IS THE SOLUTION!  N!

For Replaceable Pick Up Tips

Sticky die is one of the common problems in die bonding process using replaceable rubber tips. The die is unable to disengage itself from the rubber tip during purging cycle. SPT has developed an **AS** (anti-stick) proprietary process, eliminating the problem that radically suppresses the adhesion property of the rubber. One would expect increased in production output due less machine stoppages and longer tool life span. The anti-stick feature does not affect the rubber tip's physical & material properties. It has complied with REACH & RoHS regulations.

AS Anti-Stick

How To Order

Just add the abbreviation **AS** at the end of part number.
Example RTR-A6-012x012 Standard nitric rubber tip
RTR-A6-012x012-**AS** Anti-Stick Standard nitric rubber tip
