

**SEST : STEEL EPOXY STAMPING TOOLS**

Metallic stamping tools are used for small to medium die sizes. The tip has a specific shape depending on the range of die size and is adaptable to all shank types :

- **DAUB** tip : for die size less than .010" / 0.25mm
- **ROUND** tip : for die size less than .040" / 1.00mm
- **RECTANGULAR** tip : for die size between .040" / 1.00mm and .080" / 2.00mm
- **STAR** tip : for die size between .040" / 1.00mm and .100" / 2.54mm
- **GRID** tip : for die size larger than .100" / 2.54mm

The small stand off allows for consistent amount of epoxy to be picked up and transferred. Note: \*Standard height is .005" / 0.127mm and limited to 50% of stand-off when shorter size of TL, TW or ØF is less than .030" / 0.80mm.

Stand-off diameter is between 30% to 40% of ØF or TW but to a max. of 0.5mm. No Stand-off Pin for ØF <= 0.150mm.

Example of SEST-GRID

How To Order				
	Shank Style & Length	Tip Config.	Dimensions ØF / TL x TW	Grid N <sub>x</sub> x N <sub>y</sub>
EXAMPLE :	2102 - .625	SEST-DAUB	.010	
	MC	SEST-ROUND	1.2	
	2143	SEST-RECT	.080 x .080	
	2138	SEST-STAR	.080 x .080	
	2102-16	SEST-GRID	13.5 x 13.5	8 x 8
